

Swift Mentorship program Demo 2026

Terry Blanc

Why did I pursue a mentorship with Swift?

- Inspired by the work The Browser Company was doing with Swift on Windows for the Arc browser, I decided that I could accomplish my goals with Swift and wanted to contribute to the underlying infrastructure that would support that.

Why Swift?

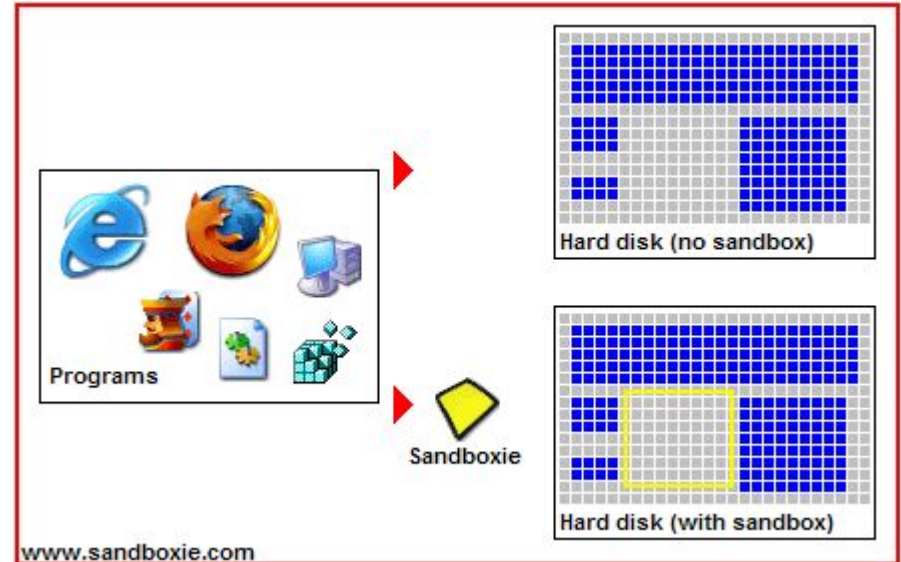

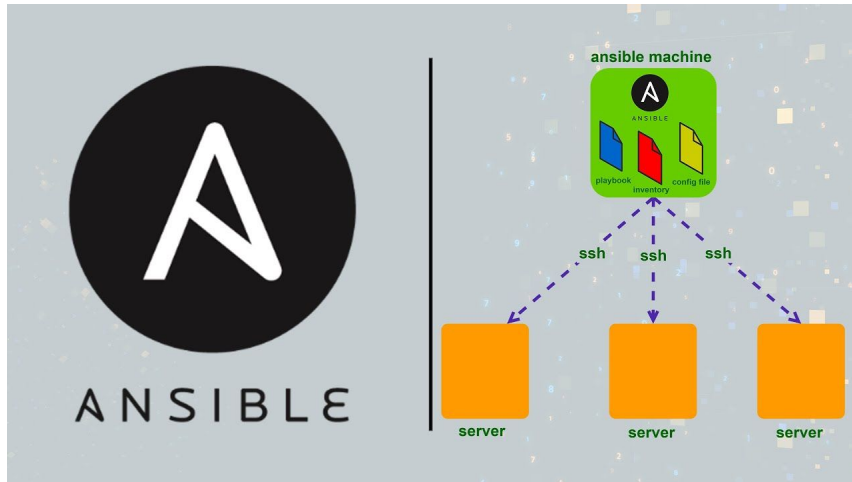

- Swift offers interop with C and C++ by design due to its Objective-C heritage, making it an excellent candidate for migrating legacy codebases to the modern safety and language features that Swift provides

Why Windows?

- My background as an IT professional was primarily in an MSP context.
- One of the most common problems I noticed was that legacy software was difficult to support. (e.g. Developers no longer provide support, No documentation, Small business cannot afford to move to a subscription based model for one-time purchase)
- How could help solve this problem?

How could I solve this problem?

- Exploring an Ansible and Sandboxie-plus hybrid?

Demo of API-hooking via Swift interoperability.

- A small step in the right direction...
